

Hi!

This folder contains all the firmware versions for the X-Sight 4K downloaded by me and with which I have updated my device from time to time.

I compressed the files in ZIP format so those who download them will have the opportunity to check the integrity of the file itself during decompression.

Normally you will find a file in .BIN format and with that it is possible update via Micro SD card only.

I started to also include updates in .ELF format that they must be used through the software made available by ATN on its website in the firmware section "ATN Factory Restore Firmware".

Direct link : <https://www.atncorp.com/factory-restore-firmware>

To directly upload an .ELF file, and therefore not install the latest version available via software, it is necessary to access the "Expert Mode".

The password is : obsidian

ATN Obsidian 4 Firmware update (1.0.2)

Expert Mode

obsidian

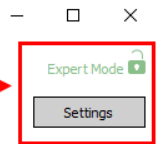

- **Step 1:** Power off your device
- **Step 2:** Connect your device via USB-C cable
